Afelio is recruiting:

Technical Functional Analyst (M/F)

Who are we?

Afelio is a Liège company specialising in the development of web and mobile applications. Afelio views the development of these applications as a profession in its own right that requires an excellent understanding not only of new technologies and ergonomics but also of the impact that our solutions will have on users.

Founded in July 2013, today Afelio is a major player not only in consulting but also in the design and implementation of IT solutions. After 4 years, Afelio has about 60 employees.

Who are we looking for?

Able to demonstrate proven experience in technical and functional analysis, the analyst must have analytical skills, communication and networking. He/she has a good understanding of the concepts of enterprise architecture and in-depth knowledge of the solutions (REST, SOAP, ...). He/she must also be able to work independently in a constantly changing environment. Dynamism, curiosity, autonomy, creativity and ability to work in a team are part of your qualities. In an emergency, you are also able to set priorities within the various tasks to be carried out.

Your tasks will therefore be limited to carrying out the functional and/or technical analyses of the customer's needs, providing the logical and technical modelling of specialised, innovative IT solutions; collaborating in the development of computer applications.
To do this, you rely on business requirements to describe the data flows and processes of the application as well as the collection of information between the various components of the system.
You must also be able to deliver high quality deliverables in relation to the predefined scope while keeping within the costs and deadlines managed in collaboration with the project manager.
You will need to track and manage incidents during the test phase and after deployment.
You should maintain regular contact with the business and developer throughout the project.

In addition, you should have some additional technical and methodological skills such as UML, Agile Scrum methodologies, and the use of Enterprise Architect. Knowledge of the non-life insurance sector is a plus.

What do we offer?

We offer you the opportunity to join a company with high growth potential belonging to the NRB Group, one of the major players in the Belgian ICT market. You will join a young, dynamic and friendly team and will have an attractive salary with many secondary benefits.

Send us your application by e-mail to jobs@afelio.be, we will be delighted to reply.
